SHANGHAI SUOTO PUMP INDUSTRIAL CO., LTD

上海卓而特泵业有限公司
SHANGHAI SUOTO PUMP INDUSTRIAL CO., LTD

COMPANY PROFILE

Shanghai SUOTO Pump Industrial Co., Ltd. is a ISO9001:2008 listed company, which is located in Shanghai, and has production bases in Zhejiang, Hunan. It is a famous diversified enterprise integrating R&D, production, sales and service of various kinds of pumps. Main products are Centrifugal pumps, Chemical pumps, Sewage pumps, Oil pumps, Vacuum pumps, Diesel pumps, Water supply system, etc. We have obtained import and export license, and own an independent foreign trade department with a professional team, providing superb and efficient service for foreign customers. Now 80% of our pumps are exported to over 40 countries in South East Asia, America, Middle East, Europe...

The company introduced the world's advanced fluid flow analysis, three-dimensional CAD, CAM, FMS and other R&D software system, and implementation of ERP management. It boasts a leading pump test center, laser forming device, coordinate measuring machine, and other total more than 200 sets of advanced production and testing equipment. Products cover construction, municipal, power, petroleum, chemical, mining and other dozens of categories, the annual production capacity of 1 million units. The company has the domestic first-class production equipment and sophisticated detection equipment, every step of the product is under rigorous testing to ensure the highest standards at the factory.

With the steady development, our company has established a perfect sales and service system, providing our clients with professional technical support and services. The company currently has: Hangzhou Sibao Sewage Treatment Plant, the water cycle works in Guangzhou New Baiyun Airport, Bao Steel and the UAE BK Gulf LLC, Vietnam Oil and Gas Group Petrovietnam, Myanmar Ticyit Coal-Burning Firepower Plant, Pakistan Darawat Dam project, and other large numbers of domestic and foreign model works.

Providing excellent products and to build world brand is what we have been pursuing. Adhering to the spirit "down to earth, scaled new heights", we will make unremitting efforts to meet customer and market needs!

Think Pump Think Suoto

CONTENTS

● I. Centrifugal Pump	
EA series end suction pump -----	01
ISG ISW series inline pump -----	02
IS IH series horizontal centrifugal pump -----	04
XS series single stage double suction split casing pump -----	15
ZX series self-priming pump -----	31
BOSP series stainless steel sanitary pump -----	33
D series horizontal multistage pump -----	35
CDL series stainless steel vertical multistage pump -----	43
QJ series deep well submersible pump -----	44
● II. Chemical Pump	
QBY series diaphragm pump -----	51
CQ series magnetic pump -----	53
FSB series fluoroplastic chemical pump -----	55
IHF series fluoroplastic-lined chemical pump -----	57
TR series rotary lobe pump -----	59
G series single screw pump -----	61
● III. Sewage Pump Series	
EJ Type Self-priming Sewage Pump -----	63
T & U series self-priming trash pump -----	64
ZW series self-priming non-block sewage pump -----	67
WQ series submersible sewage pump -----	69
● IV. Oil Pump Series	
CYZ-A series self-priming oil pump -----	71
KCB series gear pump -----	73
LQRY series hot oil pump -----	75
● V. Vacuum Pump Series	
2BV series liquid ring vacuum pump -----	77
2BE series liquid ring vacuum pump -----	79
SK 2SK series liquid ring vacuum pump -----	83
2X series rotary vane vacuum pump -----	84
XD series rotary vane vacuum pump -----	85
ZJ series roots vacuum pump -----	86

Design & Material

Bare Shaft, Direct Coupled with Electric Motor or Engine	
Design	Performance and dimensions referring to the European standard BS EN733/DIN24255
Structure	Horizontal, Axial End-Suction, Single-Stage, Single-Suction, Volute Casing, Back pull-out
DN	32 - 250mm
Flange	DIN2501 standard, ANSI B16.5 Class 150lb optional
Casing	Cast Iron standard, Ductile Iron, Stainless Steel optional
Impeller	Bronze standard, Cast Iron, Stainless Steel optional
Shaft	ASTM420 standard, ASTM304, ASTM316, ASTM1045 optional
Shaft Seal	Mechanical Seal Standard, Gland Packing optional

Operating Data

Flow Rate(Q)	2-1100 m ³ /h
Head(H)	2-150m
Speed	1450~2900 rpm (50HZ), 1750~3500 rpm (60HZ)
Temperature	-10 °C -105°C
Working Pressure	10 Bar standard, 16 Bar standard on request

Applications

- 1 General purpose pumping
- 2 HVAC and Cooling Tower
- 3 Fire Protection and Fire Fighting
- 4 Water circulation
- 5 Liquid transfer
- 6 Irrigation
- 7 Heating, ventilation and air-conditioning
- 8 Booster service

ISG(ISW) Type Inline Centrifugal Pump

Product Overview

ISG ISW series single stage single suction centrifugal pump is a high-efficient,energy-saving product successfully designed by means of adopting the property data of IS model centrifugal pump and the unique merits of close-coupled pump and strictly in accordance with ISO2858 standard and the latest national standard JB/T53058-93. It is an ideal product to replace IS horizontal pump, DL model vertical pump and other ordinary pumps.

Features

1. Easy to mount. The inlet and outlet of ISG type is located on the same central line, the pump can be directly mounted on any part of the pipeline just as a valve. Covered with a rain-proof cap, it can be operated outdoors.
2. Impeller mounted directly on the long axis of the motor, pump and motor bearing arrangement is reasonable, pump operation can effectively balance the radial and axial loads, thus ensuring the smooth operation of the pump, small vibration and low noise.
3. Mechanical shaft seal, use of titanium alloy seal ring, high temperature resistant mechanical seal, anti-wearing carbide materials,no leakage.
4. Easy installation and maintenance, no need to open pipeline system, the rotation parts of the pump can be pulled out by removing the screws on the pump.
5. According to the needs of flow and head, the pump can be used in series or parallel operation mode.

Working Conditions

1. Suction pressure $\leq 1.0\text{MPa}$, the maximum pump system working pressure $\leq 1.6\text{MPa}$, the pump hydrostatic test pressure $\leq 2.5\text{MPa}$.
2. Ambient temperature $< 40\text{ }^{\circ}\text{C}$, relative humidity $\leq 40\%$.
3. Content of solid particles in the medium per unit volume does not exceed 0.1%, particle size $< 0.2\text{mm}$.

Application

1. ISG ISW centrifugal pump is for conveying water or other liquids that physical and chemical properties similar to water, like industrial and urban water supply and drainage, high-rise building pressurized water, garden irrigation, water boosting, long-distance water transport, HVAC refrigeration circulation, bathroom and heating equipment for pressurized water circulation, temperature $< 80\text{ }^{\circ}\text{C}$.
2. ISR ISWR hot water pump is used in metallurgy, chemical industry, textile, wood processing, paper and restaurants, bathrooms, hotels and other high-temperature hot water boiler loop pressurized transport and urban housing heating circulating, temperature below $120\text{ }^{\circ}\text{C}$.
3. ISH ISWH stainless steel chemical pump is for conveying liquids without solid particles, corrosive, viscosity similar to water, which is used in petroleum, chemical, metallurgical, power, paper, food sectors such as pharmaceuticals and synthetic fibers, temperature is $-20\text{ }^{\circ}\text{C} \sim 120\text{ }^{\circ}\text{C}$.
5. ISY ISWY explosion-proof pump is for the transport of gasoline, kerosene, diesel and other petroleum products, medium temperature of $-20\text{ }^{\circ}\text{C} \sim +120\text{ }^{\circ}\text{C}$.
6. ISHY ISWHY stainless steel explosion-proof chemical centrifugal pump for conveying flammable and explosive chemical liquids.
7. The above model pump with low-speed motor, suitable for occasions that require low noise, like hospital, hotel, and air conditioning water circulation, etc.

IS(IH) Type Horizontal Centrifugal Pump

Product Overview

IS single stage single suction pump(end suction pump) is the joint designed energy-saving pump. This pump is suitable for industrial and municipal water supply and drainage, can also be used for agricultural irrigation and for conveying water or other liquids that physical and chemical properties similar to water, the temperature is not higher than 110 °C.

IH stainless steel chemical pump is used to transport corrosive liquid with viscosity similar to water and without solid particles. It is widely used in chemical industries, metallurgy, papermaking, foodstuff, pharmaceuticals, etc.

Features

1, The pump is designed according to ISO2858 international standard, mainly consist of the pump body, pump cover, impeller, shaft, sealing rings, bushings and suspension bearing parts and so on.

2, The pump is with back pull out structure. The advantage is easy maintenance, no need to remove the pump body, suction piping, discharge piping and motor, simply remove the coupling, you can exit the rotor parts.

3, Pump housing (pump body and pump cover) constitute the pump working chamber. Impeller, shaft and bearing as the pump rotor. Suspension bearing unit supporting the pump rotor parts, bearing supports radial and axial force of the pump.

IS(IH) Type Horizontal Centrifugal Pump

4, In order to balance the axial force of the pump, most of the pump impeller are equipped with sealing ring and the impeller back cover has a balance hole.

5, IS type pump shaft seal is consist of the packing gland, packing ring, and packing, so as to avoid air admission and severe water leakage.

IH type pump shaft seal has single mechanical seal and double mechanical seal two types.

6, To prevent shaft wear, it has sleeve protection. Between the sleeve and shaft there is O-ring to prevent leaking.

7, The pump and motor is connected through flexible coupling, from the motor end, the pump rotation direction is clockwise.

Model Meaning

For example: IS80-65-160A

IS - single stage single suction clean water centrifugal pump

80 - suction diameter (mm)

65 - discharge diameter (mm)

160 - impeller diameter (mm)

A - Cutting impeller for the first time

IS(IH) Type Horizontal Centrifugal Pump

Product Overview

XS type split casing pump is the new generation of high performance single stage double suction centrifugal pump, mainly used for water plant, air conditioning, water recycling, heating systems, and high-rise building water supply, irrigation and drainage pumping stations, power plants, industrial water supply system, Fire systems, shipbuilding industry, and other places of fluid transmission is the full replacement of SH, S, SA, SLA, SAP type double suction pump.

Technological Advantages

Bearing spacing between both ends is short, pump running stable, low vibration noise, and can increase the speed of running properly, to adapt to a wider range of performance.

Inlet and outlet at the same line, so that the pipeline layout is simple and convenient, beautiful.

The rotation of the same rotor can be reversed, reducing the risk of damage caused by the water hammer.

Unique design of high temperature, use of intermediate support, thick body, sealed cooling, bearing lubrication, so that the pump can run up to 200 °C occasions, especially for heating network requirements.

Pump can be vertical or horizontal installed according to using conditions, seal can be mechanical seal or packing seal.

XS Type Split Casing Pump

Performance Parameters

Outlet diameter	DN: 80~800mm
Capacity	Q: 22~11600m ³ /h
Head	H: 7~200mm
Temperature	T: -20°C~105°C(XS) -60°C~200°C(XS-R)
Solid parameter	≤80mg/L
Permissible pressure	≤2.5Mpa (XS) ≤4Mpa (XS-R)

Model Description

Example: XS250-480A-L-R (M.F)-J

- XS - new type split casing pump
- 250 - pump outlet diameter (mm)
- 480 - impeller diameter (mm)
- A - trimmed impeller for the first time
- L - Vertical installation (without the L means horizontal installation)
- R - hot water
- M - wear resistant type
- F - corrosion resistant type
- J - shaft seal is mechanical seal

Material of Flow Components

Pump casing made of gray cast iron, ductile iron or cast steel, stainless steel.

Impeller made of gray cast iron, silicon brass, bronze or stainless steel.

Shaft in stainless steel or high carbon steel.

Other materials can be used upon requirement.

XS Type Split Casing Pump

Product Overview

ZX series self-priming centrifugal pump is horizontal structure. Compare with other centrifugal pumps, no bottom valve needed at the pipeline, just to ensure the pump filled with priming fluid before working. Thus simplifying the piping system, and also improved working conditions.

Application

1. for urban environmental protection, construction, fire, chemical, pharmaceutical, dyestuff, printing, brewing, electricity, electroplating, paper, petroleum, mining, equipment cooling, tanker unloading.

2. for water, sea water and chemical liquid with acid and alkali, slurry with general paste.

3. fitted with sprinkler, can flush the water into the air and scattered into small drops in the spray, is the good equipment for farms, nurseries, orchards, tea plantations.

4. can be matched with any type of filters, to filter the slurry with a filter press.

ZX Type Self-priming Pump

Product Overview

BOSP type sanitary centrifugal pump is mainly designed for pharmacy, bioengineer and food industries to conduct GMP innovation. The pump is of excellent performance, reasonably structured, small-sized, reliable and suitable for transporting clear liquid free of solid particles, medical products like pure water, beverage and alcohols, etc.

The contact materials of BOSP type pump are entirely manufactured by SS316 or SS304. The mechanical seal adopts wear-resisting, corrosion-resisting hard metal. The seal ring is made of silicon rubber and fluorine rubber. The impeller is semi-open, enclosed and easy to wash and in compliance with relevant regulations in «Good Manufacturing Practice» (namely GMP) and «The Food And Drug Administration (FDA).»

Design and features

Different connections standard: DIN, SMS, JIS, ISO.

Open impeller manufactured with stainless steel investment casting technology.

Sanitary mechanical seal.

Pump certified according to 3A sanitary standards.

Very robust stainless steel cast lantern.

Pump support from AISI 304.

BOSP Type Sanitary Centrifugal Pump

Materials

Parts in contact with pumped media	AISI 316L or 304
Other parts in stainless steel	AISI 304
Gaskets (standard)	EPDM (FDA)
Mechanical seal (standard)	graphite/SiC/EPDM
Inside surface finishing	Ra < 0.4 um.
Outside surface finishing	Mirror polished

Options

Mechanical seals in SiC/C, SiC/SiC or TgC/SiC.
Cooled or double mechanical seal.
Gaskets in FPM, Viton and PTFE.
Connections: Clamp, SMS, RJT, etc.
Motors with additional protection.(movable, Explosion proof).
Trolley and/or Switchboard.

Applications

- * Drugs: transfusion, distilled water, high pure water, containing particles (3-6 mm) of the medicine liquid leachate.
- * Cosmetics: dyes, alcohol, essential oils.
- * Beverages: alcohol, liquor, beer, wort, fermentation broth, juice drinks, beverages with particles.
- * Dairy: whey, cream, milk, sugar
- * Other: Candy industry, baking industry, chemical industry, etc.

Product Overview

This series of pumps use national energy-saving hydraulic model, developed and updated constantly by our factory, with the advantage of high efficiency, wide range of performance, safety and smooth operation, low noise, easy installation and maintenance, long life, and its technology level is in the domestic leading position, product performance is reliable.

It is used to transport liquids without solid particles. It can also transport hot water, oil products, corrosive or abrasive media and so on by means of changing the pump material and sealing mode and adding a cooling system.

Features

1. The pump is a horizontal, single suction, multi stage centrifugal pump section, the suction is in horizontal direction, and outlet is vertical upward. Water suction, middle, discharge section, bearing housing and pump body are bolted into one strain, and select stages according to the pump head.

2. Rotor includes shaft, impeller, shaft sleeve, balance disk, and other parts. Axis parts are connected through the flat keys and the shaft nuts. The rotor is supported by the rotor bearings or sliding bearings in both ends, the bearing does not bear axial force, axial force is balanced by the balance disc. Bearings lubricated with grease, sliding bearings lubricated with light oil, and oil ring lubrication, and cooled by circulating water.

3. Shaft seal in the form of two kinds, mechanical seals and packing seal. When use packing seal, the packing ring should be placed at the right location, the tightness of packing must be appropriate to the liquid oozing drop by drop. Various sealing elements is in a sealed chamber, the chamber must be filled with some water, as water seal, water cooled or water lubrication. At the seal there is replaceable sleeve, to protect the shaft.

4. The pump is directly driven by motor through the flexible coupling. From the motor direction, the pump is clockwise rotation.

CDL Type Vertical Multistage Pump

Product Overview

Non self-priming type vertical multistage centrifugal pump, the motor is directly connected with the pump through shaft couplings, impeller guide vane is made of stamping stainless steel plate or precision casting stainless steel, smooth surface, hydraulic flow loss is small, and easily for cleaning, is very favorable for conveying pure medium. Pump inlet and outlet in a straight line (can be equipped with IEC or NEMA motor).

Operating Conditions

Thin, clean, non-inflammable and explosive liquid, not containing solids or fiber.

The liquid temperature: normal temperature type
- 15 °C to 70 °C hot water type to + 120 °C

Environmental temperature: highest + 40 °C

Height: highest 1000m

Motor

Motor is fully enclosed, air-cooled type 2 pole standard motors.

Protection grade: IP55

Insulation grade: F

Standard voltage: 1Ph 220-230/240V

3Ph 200-220/346-380V

3Ph 220-240/380-415V

3Ph 380-415V

Typical Application

Water supply: water filtration and conveying, waterworks water supply, pipe pressurization, high-rise building pressurization.

Industrial pressurization: process water system, cleaning system, high pressure flushing system, fire control system.

Industrial liquid transportation: cooling and air conditioning system, the boiler feed water and condensation system, machine tool accessory, acid and alkali.

Water treatment: ultrafiltration system, reverse osmosis system, distillation system, separator.

Irrigation: farm irrigation, sprinkler, drip.

QJ Type Deep Well Pump

Product Overview

QJ series submersible deep-well pump is new type high grade product developed and produced based on the American, Italy advanced electric pumping technology. Main parts adopt stainless steel, copper alloy, make the pump high efficiency, energy-saving, wear resistance, rust and pollution resistance, good appearance, convenient installation. Especially suitable for factories, colleges, industrial and civil, irrigation and extraction of groundwater.

Product Range

1. 4" Submersible pump, The impellers and the diffusers are in plastic material(noryl),whereas the bearings are in ceramic/rubber lubricated by the water circulation.Check valve is incorporated in the delivery body with threaded outlet.The coupling Pump-motor is according to NEMA regulations.

2. 6"、8" Submersible pump, The impellers and the diffusers are in grey cast iron, (on request, the impellers can be supplied in bronze), whereas the bearings are in ceramic/rubber lubricated by the water circulation. Check valve is incorporated in the delivery body with threaded outlet (on request , it can be supplied flanged). The coupling Pump-motor is according to NEMA regulations.

3. 4"、6" Stainless steel submersible pump, the pump caising/impeller is made of stainless steel 304, 316.

Product Overview

Pneumatic diaphragm pump is a new type of conveyor machinery, adopts compressed air as power source, suitable for various corrosive liquid, with particles liquid, high viscosity and volatile, inflammable, poisonous liquid. The main characteristic of this pump is no priming water needed. High suction head, adjustable delivery head, fire and explosion proof.

Working Principle

In the two symmetrical pump chamber equipped with a diaphragm, which is connected by a center couplet stem. Compressed air comes in from pump inlet valve, and enter into one cavity, push the diaphragm movement, and gases emitted from another cavity. Once to the destination, gas distribution components will automatically compressed air into another chamber, push the diaphragm to the opposite direction, thus make two diaphragm continuous synchronization to reciprocating movement.

Compressed air goes into the valve, make the diaphragm to the right movement, and chamber suction make medium enter into, push the ball into the room, ball valve shuts down due to inhalation, Mediums discharged by extrusion, and opened the ball valve and at the same time close the ball valve, prevent back flow, thus to make medium ceaseless from the entrance inhaled, exit education.

QBY Type Diaphragm Pump

Main Advantages

- 1, Due to the use of air power, the flow automatically changed according to export resistance, which is suitable for high viscosity fluid.
- 2, In inflammable and explosive environment, the pump is reliable and low cost, won't produce spark and not overheat,
- 3, The pump volume is small, easy to move, no foundation needed, convenient installation and economy.
- 4, Where there are dangers, corrosive materials processing, diaphragm pump can be separated completely with outside.
- 5, The pump shearing force is low, physical effect to medium is small, can be used for conveying unstable chemistry fluid.

Product Overview

In petroleum, chemical, pharmaceutical, electronic, and many other fields, require no leakage of the transmission medium in process, urgently need to choose the ideal pump type. Our CQ series magnetic pump successfully solved the current domestic magnetic pump impeller isolation cover, impeller that easily damaged technical problems, make its function more perfect.

Product Features

CQ stainless steel magnetic pump is a new type of pump that uses magnetic couplings working principle to transmit non-contact torque. The motor drives outside rotor, through magnetic, drives inside rotor, while the rotor is connected with the impeller, thus achieved non-contact to rotate impeller purposes. Since liquids was closed in the stationary isolation chamber, magnetic pump is a fully enclosed, leak-off pump type, so as to completely eliminate the inevitably drop, leak problems of the mechanical seal type centrifugal pump.

CQ Type Magnetic Pump

Product Overview

Pump flow components adopt stainless steel (plastic is available for small models) material, it is widely used in petroleum, chemical, pharmaceutical, electroplating, environmental protection, water treatment, national defense, and other departments to transport inflammable, explosive, toxic and precious liquids, is the best choice for non-leakage, no pollution working environment.

Product Overview

Our FSB type fluoroplastic alloy chemical pump, can be used to convey any concentration of all sorts of acid, alkali, salt, strong oxidizer etc. and its body and flow-passing parts are made of F46 fluorine alloy, it combines the advantage of many fluorine plastic, with particularly strong corrosion resistance, and with high mechanical strength, not aging, no toxin decomposition. This product is with reasonable design, compact structure, reliable performance, convenient operation and maintenance, high efficiency, and energy conservation.

Pump Shaft Seal

FSB type fluoroplastic alloy centrifugal pump adopts the advanced outside-fitted bellows mechanical seal, with multilayer protection and prolong the service life. For conveying with impurities particle medium, can use waterless cooling single seal face (carborundum material) mechanical seal, so medium solid content should be considered when selection.

FSB Series Fluoroplastic Chemical Pump

Pump Shaft Seal

FSB type fluoroplastic alloy centrifugal pump flow components adopt fluoroplastic alloy material, compact structure, simple operation, low price. The pump body, impeller, pump cover, mechanical seal parts can be changed with FSB (D) type direct coupled fluorine alloy centrifugal pump, it is widely accepted by our customers.

Product Overview

IHF fluorine plastic centrifugal pump is made according to the international standards and combining nonmetal pump design process. Pump body adopt metal casing lining FEP (F46), pump cover, impeller and bushings use metal embedded parts coating fluorine plastic sintering, shaft seals use out-fitted type advanced bellows mechanical seal, static ring choose 99.9% alumina ceramics (or Si_3N_4), rotating ring adopt F4 filled material, its anti-corrosion and wear-resisting ability is extremely good.

Actual use showed that the pump has the advantages of anti-corrosion and wear-resisting, high temperature resistant, not aging, high mechanical strength, stable operation, advanced structure, reliable sealed performance, simple disassemble and maintenance, long service life etc.

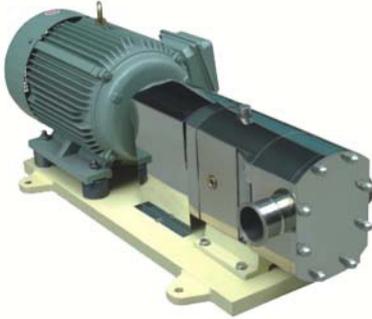

Application

IHF fluorine plastic centrifugal pump is widely accepted by its anti-corrosion and wear-resistance advantages, is widely used in chemical, making acid, alkali manufacturing, smelting, pesticide, dye, medicine, papermaking, electroplating, electrolysis, pickling, scientific research institutions, national defense industry and other industries conveying arbitrary concentration of acid, alkali, oil, the rare and precious liquids, toxic liquid, volatile chemical medium. It is currently one of the most popular pumps.

Product Overview

Lobe pump, rotor pump (rotary lobe pump), also known as colloidal pump, clover pump, is suitable for soft transporting of medium with particles or high viscosity materials, which is widely used for health and sterile applications, like food, beverage, chemical, pharmaceutical and other industries.

Features

- a) Lobe pump is a positive displacement pump, transmission flow can be more accurate controlled, and have strong self-priming capacity.
- b) The speed is low, generally between 200rpm to 600rpm, the material is transferred stably and its composition will not be destroyed, so it is especially suitable for handling mixtures or medium containing solid particles.
- c) Lobe pump can be used for high viscosity mediums, so also called gel pump.
- d) The output pressure can be high, such as 1.5MPa, which is suitable for long distance or high-resistance quantitative transportation.

Application

1. Food and beverage categories: dairy products, latex, chocolate, syrup, cheese, malt juice, beer, soft drinks
2. Fruit concentrates: pudding, jam, jelly, tomato sauce
3. Paste products: fats and oils, etc.
4. Cosmetics: creams, detergents, hair gel, perfume oils, etc.
5. Drug categories: extract, cream, paste and so on pills
6. Chemical industry: dyes, fats, solvents, resins and polymers

TR Type Lobe Pump

Selection Instructions

- * Operating temperature: -20 - 150 °C (maximum sterilization temperature of 180 °C)
- * Working environment and the media: to determine whether proof.
- * Working conditions: lobe pump is self-priming type, speed control can be mechanical control or frequency control options.
- * Pump Material: 316L and 304 according to requirements of selected medium.
- * Sealing materials: standard rubber ring is silicone rubber. According to media select Viton, EPDM, PTFE, NBR. Standard mechanical seal is silicon carbide - hard alloy, according to media select graphite - silicon carbide, graphite - ceramics, etc.
- * Suction connection: standard quick clamps, upon request, select the pipe thread, flange, DIN standard, welding and so on.

Product Overview

Single screw pump is volumetric working principle type pump, main working parts are eccentric screw (rotor) and fixed bushings (stator). Because of the special geometric shapes, the two parts form respectively separate sealed chamber, medium uniform flow by axial, internal flow is slow, volume remains the same, the pressure is stable, and will not produce vortices and agitation.

Because the stator adopts various elastic materials, this kind of pump has general pumps not competent properties to convey high viscosity fluid containing rigid suspended particles or fiber. Its flow and speed become direct ratio.

Features

- ◆ Wide application; convey both fluid and non-fluid
- ◆ Constant fluid conveying process, with little pulsating flow
- ◆ No stirring of medium in the pump, no extrusion or cutting
- ◆ Capacity is directly proportional to the speed; variable conveying; used as metering feeding
- ◆ Adopt elastic stator, with certain abrasion resistance

G Type Single Screw Pump

Conveying Medium

- ◆ Medium of various viscosities (viscosity is up to 106 mm²/s)
- ◆ Fluid of various concentrations and dry material through separation dehydration
- ◆ Various solid particles, fibers and suspended matters

Product Series

- ◆ XG Standard Series Applied to various structure forms
- ◆ XL Long-lead Series Applied to low-pressure large-flow
- ◆ XP Special for concrete spraying before coal water slurry boiler

Several Configurations

- ◆ Material: Components and parts can be made of different metals and rubber materials
- ◆ Drive Types: motor reducer drive, variable speed motor drive, mechanical variable speed drive, etc.

Design & Material

• Bare Shaft • Direct Coupled with Electric Motor or Engine	
Design	Performance and Dimensions referring to the European standard
Structure	Semi-open impeller, Horizontal, Single-Stage, Single-Suction, Self-priming
DN	40 – 200mm
Flange	All EJ pumps are casted with flange
Casing	Cast Iron standard, Ductile Iron & Bronze optional
Impeller	Ductile Iron standard, Bronze, ASTM304, ASTM316 optional
Shaft	ASTM1045 standard, ASTM304, ASTM316, ASTM420 optional
Shaft Seal	Mechanical Seal (SiC-SiC/Viton)

Operating Data

Flow Rate(Q)	2-160 l/s
Head(H)	4-60m
Speed	1450~2900 rpm(50HZ), 1750~3500 rpm(60HZ)
Temperature	≤105℃
Working Pressure	0.6 MPa
Max Solids	76 mm

Application

- Waste Water Treatment Plant
- Portable Emergency Fire Fighting
- Marine – Ballasting & Bilge
- Transfer of liquid containing sand, particle and solid in suspension

T&U Type Self-priming Trash pump

Product Overview

The self-priming non-clog centrifugal trash pump is our latest generation product base on US technology and craftwork. It is designed for economical & trouble-free operation in handling solid-laden liquids and slurries.

Main character

1. beautiful shape and fine structure, reliable performance;
2. with strong capacity of self-priming, no need to equip with flap valve;
3. non-clog, and with powerful capacity of passing big solid;
4. The unique lubrication oil mechanical seal cavity makes the performance more reliable.
5. The hole can make sure that stronger sewage can be cleaned quickly when pump is jammed.
6. Special check valve structure can make the pump start quickly next time.
7. When operated, the pump can self-priming with gas and liquid at the same time.
8. Low rotary speed, reliable operation, long useful life, easily maintenance.
9. Advanced pressure protector make pump operate safety.
10. Very competitive price, high quality, small MOQ, fast delivery, OEM required, exporting plywood case.

Features: Solids Handling Impeller, Exclusive Abrasion-Resistant Seal, Removable Cover Plate with Easy-Grip Handle, Replaceable Wear plate, Removable Rotating Assembly.

Application

1. Municipal Project, Sewage Project, Instruction Project;
2. Transportation of the sewage of uptown;
3. Sewage transportation in Hospital, hotel,slaughter house,fish breeding;
4. Classification of municipal sewage treatment factory and concentrate treatment systems engineering;
5. Transportation of the factory and contaminated water;
6. Sewage and deposit of water purifying system;
7. Industrial sewage of light industry,paper mill,textile,food processing plant,chemical industry,electric utility,deep mines,etc.;
8. Wine and sugar industry;

Operation condition

1. The temperature of medium no more than 80°C,the density of medium is 1.0~1.3*103Kg/m³,PH is within5~9.
2. Max diameter of solid should be less than76.2mm.
3. Max suction lifts no more than 3 inches or 7m.
4. Volume ratio of solids in the medium ≤2%.
5. Max.working pressure and suction head please refer to performance curve and table.

T&U Type Self-priming Trash pump

Inlet/Outlet	2"(50mm), 3"(80mm), 4"(100mm), 6"(150mm), 8"(200mm), 10"(250mm), 12"(300mm)	
Impeller Diameter	158.74mm-457.2mm	
Rotary Speed	550RPM-2150 RPM	
Flow Rates	8m ³ /h-1275m ³ /h	20GPM-5500GPM
Head	6m-63m	
Horsepower	1HP-125HP	
N.W	92KG-998KG	
G.W	114KG-1066KG	
Solid Passing	20.63mm-76.2mm	
Material	cast iron, ductile iron, stainless steel, CD4MCU, aluminum, bronze	
Diesel Driving	Water cooled or air cooled	
Method of Connection	Self-priming pumps are available as basic units or may be flex-coupled, V-belt driven or engine mounted.	
Drive Variation	Cummins, Deutz, Ricardo, Perkins or Chinese Diesel, Electric Motor	
Skid Mounted on Trailer	2 wheels or 4 wheels Trailer	
Package	Exporting plywood case	

Product Overview

ZW series self-priming sewage pumps have the advantage of self-priming and non-clogging, can be installed without bottom valve, and can pump dirty water with large particles, dirt, fibers, abandoned mine sediment impurities, and other works of sewage treatment and waste material, completely reducing labor intensity, and can make mobile type, easy installation, minimal maintenance, stable performance.

Structure Description

1. ZW series self-priming non-clogging sewage pump, is mainly composed of pump body, impeller, back cover, mechanical seal, bearing, inlet valve, water valves, suction and discharge pipes, etc.

2. In the pump body has a reservoir chamber, which is connected with the top back-flow hole and bottom circulation hole and pump working chamber, interlinked to form the axial pump back outer recirculation system. When pump stops working, the pump cavity has a certain volume of the liquid reservoir. When the pump starts, under the action of the impeller, the air is rounded up with the liquid through the gas-liquid separator, and the liquid back into the working chamber, while the gas is discharged from the pump, so as to form a certain vacuum in the pump chamber, to achieve self-absorption effect.

Applications

ZW type self-priming non-clogging sewage pump can be widely used in municipal sewage works, farm, light industry, paper making, textile, food, chemical, electrical and other industries, which is the best trash pump for pumping fiber, pulp and other chemical media mixed with suspension.

Product Overview

WQ type non-clog submersible sewage pump is made up of motor and pump, which are separated through oil isolation room and mechanical seal, it is short in length that motor and pump share the same axle (rotor), the structure is compact.

Structure Features

1. Signal line: for motor power above 11kw, we suggest pump equipped with control box, which would protect the pump fully from leakage, phase reversal, short circuit, overheated, overload, etc..
2. Motor stator: its insulation is B grade or F grade.
3. Water leakage probe. This component is installed in the oil room, if the mechanical seal was damaged, and water enters into the oil room, it will send out the signal to the control system so as to stop the pump.
4. Mechanical seal: Adopting in-series seal, the material is the wear-resisting carbonization tungsten, featuring being reliable, wear-resisting, longer life, etc.
5. Impeller: have better handling capacity, can reduce the trouble of jamming and twisting of big fiber rubbish, etc.
6. Pump body: harmonize with impeller, ensure the pump has high efficiency.
7. Seal rings: Installed at the mouth place of pump body, can change the sealed ring after long time operating, so as to ensure the pump runs with the best efficiency.

Advantages

1. Adopt big flow non-clog design, improving the ability to pass dirty things greatly.
2. The design is rational, with high efficiency, and the energy-saving is remarkable.
3. Adopts in series mechanical seal, the material is the wear-resisting carbonization tungsten, featuring being durable, wear-resisting, long service life.
4. The structure of the pump is compact, small, may move conveniently, installation is simple and

WQ Type Submersible Sewage Pump

convenient, it is submerged into the water, no need to build the pump house, reduce construction cost greatly.

5. There is probe in the oil room of the pump, if the pump side mechanical seal is damaged and water enter into the oil room, it would give off signals so as to protect the pump.

6. Can be equipped with control box according to the needs of user, it will protect the pump from electric leakage, water leakage, overload and overheated, etc. guarantee the pump operates reliably and safely.

7. The automatic coupling installation system of one pair of guides, it is convenient for the installation and maintenance of the pump, no need to enter into the sewage hole.

8. The float switch, according to the necessary water level changing. Control the start and stop of the pump automatically, no people needed to guard it.

9. According to use situation, the motor can adopt water jacket circulation cooling system type, which can guarantee the safe operation of the pump under the dry state.

10. Installation can be fixed automatic coupling installation or non-fixed portable installation, which can satisfy different occasions.

9. According to use situation, the motor can adopt water jacket circulation cooling system type, which can guarantee the safe operation of the pump under the dry state.

10. Installation can be fixed automatic coupling installation or non-fixed portable installation, which can satisfy different occasions.

Working Conditions

1. Temperature Of medium not exceeding 60°C , gravity 1.0~1.3kg/dm³,and PH value between 5~9.

2. For pump without internal gravity flow circulation cooling system, its motor above liquid surface by less than 1/3.

3. Generally, pumps shall be working within the range of head to protect the motor from overloading. To work at the full head. please specify when placing an order for our convenience in manufacturing.

4. The current of motor during the process of operation shall not exceed the rated value.

Applications

This series of pumps are mainly used in municipal engineering,buildings,industrial sewage discharge,sewage treatment in environmental protection,factories and mines to deliver sewage,wastewater and rainwater etc,containing solid substances and long fiber.

Stainless steel type may also be used to deliver corrosive medium.

Product Overview

The CYZ Self-priming centrifugal oil pump is the new pump developed based on international technical information. The pump has the ability of simple structure, easy operation, smooth running, easy maintenance, high efficiency, long life, strong ability of self-absorption. No bottom valve needed to install in the pipeline, just to ensure that pump body filled with priming oil before work. It is suitable for the oil tanker or water transportation on the ship, it can also be used as stripping pumps.

Applications

CYZ Self-priming centrifugal pump is suitable for the oil industry, land-based oil depots, tanker as bilge pumps, fire pumps and ballast pumps and cooling water circulation pumps, to transport gasoline, respectively, kerosene, diesel, jet fuel and other petroleum products and water, sea water, medium temperature -20°C -80°C . If using corrosion-resistant mechanical seals and stainless steel material, can also be used in chemical, pharmaceutical, brewing, electroplating, printing and dyeing, paper making, power and mining industry, etc.

Product Overview

KCB series gear pump is applicable to transport lubricating oil or other liquids properties similar to lubricants that not containing solid particles and fiber, noncorrosive, no more than 80 °C, viscosity $5 \times 10^{-6} \sim 1.5 \times 10^{-3} \text{m}^2 / \text{s}$ (5-1500cSt).

Structure Characteristics

This series gear pump is composed of gear, shaft, pump body, relief valve, shaft seal. Gear is heat treated and has high strength and rigidity, together with the shaft installed in the replaceable sleeves. Pump parts are entirely lubricated by output medium.

Pump inside has reasonable back oil slot, make the gear work under minimum torque force, bearing load small, pump with high efficiency.

Pump has relief valve as overloading protective, the total reflux pressure of safety valve is 1.5 times the pump discharge pressure, also can be adjusted according to the actual need. But note that this relief valve cannot be used as pressure reducing valve for a long time, when needed can be separately installed in piping.

Looking from the shaft overhanging end, the pump rotates clockwise.

KCB Type Gear Oil Pump

Applications

In oil system used for transportation, pressure boosting;

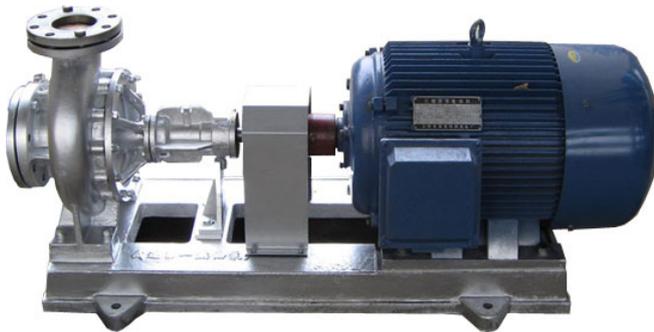

In the fuel oil system used for conveying, pressurization, jet fuel pump,

In hydraulic transmission systems used for providing hydraulic power,

In all industrial areas, it can be used as lubrication oil pump.

Products overview

Thermal oil pump adopts the self-heat-radiating structure, change the traditional water cooling structure, make it more simple, small volume, economy operation cost, good performance, reliable operation, it is the second generation product based on our country digesting and absorbing foreign technology.

Structure Characteristics

1. Basic structure is single stage single suction cantilever feet support, pump suction is axial inhaled, discharge center vertical, and installed in a same base with motor.

2. Pump supported by double ball bearing, front end lubricated by lubricating oil, back end lubricated by grease, a guide tubing in the middle, to observe the conditions of sealing at any time and recovery of heat conduction oil.

3. Hot oil pump shaft seal:

(1) with the combination of packing seal and mechanical seal, packing seal use high temperature resistant packing, has the good thermal adaptability, while mechanical seal adopts high mechanical strength and wear resistance, good hard alloy material, which guarantees the sealing performance under high temperature conditions.

(2)adopts PTFE as lip shape seal, make the sealing performance much better, seal reliability of 25 times than rubber seal, and with very strong corrosion-resist ability.

Model Meaning

For example: LQRY 65-50-170

LQRY - hot oil pump

65 - pump suction diameter mm

50 - pump discharge diameter mm

170 - pump impeller nominal diameter mm

LQRY Type Hot Oil Pump

Model	Capacity (m ³ /h)	Head (m)	Speed (r/min)	Power (KW)		Eff. (%)	NPSH (m)

Products overview

2BV series water ring vacuum pump is suitable for pump air with water vapor, inspiratory pressure can reach 33mbar absolute pressure (97% vacuum degree). When the pump works under the inspiratory pressure is close to limit vacuum (work fluid saturation vapor pressure) for long time, should connecting cavitation protecting tube, to protect the pump. When work as the compressor, the greatest pressure is up to 0.26 Mpa (absolute pressure). As a new generation energy-saving products, with its excellent performance and numerous advantages, 2BV series water ring vacuum pumps will be fully replace SK, 2SK series water ring vacuum pumps and W, WY, WL series reciprocating pump.

Main Features

1. Direct coupling design, save space, easy to install and convenient maintenance.
2. All equipped with cavitation protection tube, if works under limit work pressure, open cavitation protection tube (or with separator connection) can maximum guarantee inspiratory effect under the condition of cavitation, and protect the pump.
3. 2BV series can be equipped with stainless steel impeller, high strength and durability, and improves the corrosion resistance of the pump.
4. Unique flexible air outlet design, won't produce over compression, ensure its performance efficiency is the best.

2BV Type Liquid Ring Vacuum Pump

5. All adopt Y2 series motor, IP54、IP55 protection (ordinary, IP44), insulation class F (ordinary is class B insulation).

6. The flexible seal can be completely PTFE, which can greatly extend pump service life under harsh conditions.

Model	Max. Capacity (m ³ /h)	Limit Pre. mbar(Mpa)	Power (kW)	Speed (Rpm)	Water Flow (L/min)	dB(A)	W (kg)

Products overview

2BEA series water ring vacuum pump is a kind of high-efficiency and energy-saving product developed on the basis of years of production experience and scientific research, combined with international advanced technology, typically used for pumping gas without solid particles, insoluble in water, and non-corrosive, so as to form a vacuum in a sealed container. By changing the materials, it can be used for pumping corrosive gases or corrosive liquids. It is widely used in papermaking, chemical, petrochemical, light industry, pharmaceuticals, food, coal, mineral processing, and other industries.

Features

1. Use imported bearings to ensure accurate location and stable operation of the impeller.
2. Impeller material use cast iron or welded steel, and fully guarantees the impeller stability in a variety of adverse conditions, and greatly increased the pump life.
3. Pump body uses steel, increase the service life of vacuum pump.
4. As the most easily damaged parts, the shaft sleeve uses high-chromium stainless steel, life expectancy has increased by 5 times.
5. Pulley (belt drive) is standard high-precision, reliable operation and long service life and convenient disassemble.
6. Coupling (direct transmission) uses standard high-strength flexible coupling, flexible component uses polyurethane material, which is stable and reliable operation, long service life.
7. Unique top-mounted gas-water separator to save space and reduce the noise.
8. All casting uses resin sand casting, which is good surface quality, pump cooling well.
9. Mechanical seal (optional) is imported, fully guaranteed no leakage in the long-running process.
10. Casing inner wall is similar to the type of oval, ensure the best exhaust results.

Notes

1."D" means "Direct drive"; "V" means "V-Belt drive".

2.The motor recommended above can work under most conditions. If the discharge pressure exceeds the scope of 0.02~0.05 Mpa(G), it is necessary to increase the motor power. If the shaft power corresponding with the work pressure of the 2BE series vacuum pump is lower (refer to the curve of the shaft power), the motor with lower power closed to the shaft power can be used for saving energy

Products overview

SK(2SK) water ring vacuum pump is a kind of rough vacuum pump, which can obtain 4~8kPa ultimate pressure for the single-stage pump, and 2~4kPa for 4 ~ 8kPa for the two-stage pump. Pumps of this series possess compact structures, and are reliable to use, convenient to install and disassemble, and easy to maintain.

As the gas compression process of the water ring pump is under isothermal condition, the flammable and explosive gases can be exhausted, as well as gases containing dust and water; Therefore the application of the water ring pump is growing.

Applications

They are mainly used for pumping air and other gases which have certain corrosivity and a small amount of dust, which are not soluble in water, and widely used in many technical processes in the petroleum, chemical, machinery, mining, light industry, paper-making, power, metallurgy, medicine, food and other industries and municipal and agricultural sectors, such as vacuum filtration, vacuum feeding, vacuum degassing, vacuum evaporation, vacuum concentration, vacuum resurgence, etc.

Model	Capacity (m ³ /min)	Ultimate Pressure(Pa)	Power(Kw)	Speed (Rpm)	Flow of Supplying Water(L/min)	Diameter (mm)	Weight (kg)

2X Series Rotary Vane Vacuum Pump

Application

2X pump is one of the basic equipment for obtaining vacuum for airtight containers by exhausting gas. It can be used alone, or used as the fore pump in front of the booster pump, diffusion pump, molecular pump, etc. This pump is applicable to the vacuum metallurgy, vacuum welding, vacuum impregnation, coating, vacuum drying, as well as the vacuum treatments in chemical and pharmaceutical industry, electric vacuum devices and other industries.

Application

1. The pump can work within the ambient temperature range of 5~40 and under the inlet pressure less than 1330Pa. It is also allowable for long-term continuous work.
2. The pump is neither applicable to pump the gases which have excessive oxygen content, poisonous and explosive feature, and chemical reactions with oil of pumps, and dust particles, nor act as a transfer pump to transfer gas form one container to another.
3. The continuous working hours of the pump under the inlet air pressure of 6000Pa shall not exceed 3min to avoid damages caused by oil injection or bad lubrication.

Model	2X-4A	2X-8A	2X-8	2X-15	2X-30A	2X-70A
Pumping Speed (L/S)	4	8	8	15	30	70

Products overview

XD type vacuum pump is single stage structure, features high speed, low noise, quick pumping and high efficiency. Pump is air cooled and provides with anti-backing structure to prevent oil from backing to the pumped system. Exhaust filter is fitted inside the pump to effectively eliminate oil mist. It is widely used in food vacuum packaging, pharmaceuticals, paper fdding in printing machinery, glass delivery, vacuum clamp, drying and so on.

XD series vacuum pump has the following characteristics:

1. Direct transmission, compact structure, light weight;
2. Air cooling, no water, easy to operate, low maintenance costs;
3. Multi-vane and the bottom is equipped with rubber pads, smooth, little vibration;
4. Pump oil separator can effectively remove small oil mist exhaust;
5. Pump design with automatic oil circulation system, often without refueling;
6. Pump has the automatic suction valve, when the pump stops working, pump suction valve and pumping system to be isolated automatically to prevent the oil back into the system;
7. High efficiency.

ZJ Series Roots Vacuum Pump

Summary

The Roots vacuum pump is also known as the mechanical booster which is a positive displacement type pump. It is one of the special pumps which can reach middle, high vacuum range. Its work principle is similar to the Root fan. Both of them used a pair of rotors, whose shape looks like 8, to achieve the suction and discharge process.

According to the technics that the plenty of vapor and solvent is required to pump in the mechanical, pharmacy areas, we have improved the seal type of the bearing housing and gear box of the ZJ series Roots pump to reduce the emulsification of the pump oil efficiently and make the Roots pump more suitable to assemble with the water ring vacuum pump to suction more vapor and solvent.

Main Characteristics

- It has larger suction capacity in the wider pressure range($1\sim 1*10^4\text{Pa}$).
- There is no oil in the pump chamber, so the pollution of the oil vapor is avoided.
- It has less vibration and lower noise.
- It has less mechanical attrition and drive power.
- It is easy to repair and maintenance, so it has lower maintenance charges and longer usage life.
- It can pump the coagulated gases.
- It cannot be used separately, a fore pump is needed. Under the atmosphere, it is not allowed to start directly until the inlet pressure reaches the definite pressure that obtained by the fore pump. The water ring vacuum pump, the oil ring vacuum pump and oil seal mechanical pump can be used as the fore pump.

ZJ Series Roots Vacuum Pump

Type		ZJ-15	ZJ-30	ZJ-70	ZJ-150	ZJ-300	ZJ-600	ZJ-1200	ZJ-2500
Suction capacity (L/s)		15	30	70	150	300	600	1200	2500
Limited vacuum (Pa)		5*10 ⁻²							
Max. pressure (Pa)		8000	8000	8000	6000	4500	4500	3000	3000
Speed (r/min)		1390	2770	2870	2900	1450	2900	1450	1450
DN (mm)	Inlet	50	50	80	100	150	150	300	400
	Outlet	40	40	50	100	150	150	300	400
Weight (kg)		75	75	100	215	480	503	1580	2150
Power (kW)		0.55	0.75	1.5	3	4	7.5	15	22
Noise (dB)		<or=78	<or=78	<or=78	<or=82	<or=83	<or=86	<or=90	<or=90
