

SUSTAINABLE DEVELOPMENT GOALS

Contribution to the United Nations Sustainable Development Goals (SDGs) by Proshare Innovation Suzhou Co.,Ltd.

The United Nations Sustainable Development Goals (SDGS) set out a common global agenda for 2030. In addition to our general responsibilities, we also focus on sustainable development goals where our business activities can have the greatest impact. We are working with our customers, supply chain partners, and other stakeholders to develop greener, safer and more efficient solutions.

Launched in 2015, the SDGS provide a clear direction for the 2030 World Agenda for Sustainable Development. Here you can learn about some of our main activities and our contribution to achieving the SDGs.

Ongoing activities - United Nations Sustainable Development Goals 2030 Agenda

3 GOOD HEALTH AND WELL-BEING

We have photos (attachment) to prove that we provide a quality, healthy office environment for our employees.

We are covering health insurance for all 40 employees and schedule regular checkups. On holidays, we have some employee benefits.

5 QUALITY EDUCATION

We oppose any form of discrimination, such as discrimination based on race, color, language, gender, religion or sexual orientation. Through different working hours models, we cater to the individual needs of our employees and provide equal opportunities for men and women in the company.

In management and operation department, over 40% of our employees are women.

6 CLEAN WATER AND SANITATION

The founder of PROSHARE, Dr Lin, was involved in an association donation program called Operation Lotus, which donated water purification equipment to primary schools in remote areas of China.

7 AFFORDABLE AND CLEAN ENERGY

PROSHARE's main products, including reverse osmosis membrane, nanofiltration membrane, and material separation membrane, are all recyclable. Our membrane products are widely used in water reuse and wastewater treatment in various industries, such as traditional petrochemical industry, municipal sewage treatment, production and processing of lithium battery materials, seawater desalination, etc. We are committed to helping to achieve global water renewable. At our new plant site, we plan to install photovoltaic panels on top of the plant to recover clean energy and use it.

8 DECENT WORK AND ECONOMY GROWTH

Safety and health at work depend on our own operations. Our work in health and safety is built on the belief that accidents, near-misses and work-related illnesses can be prevented. We have developed a comprehensive safety and environmental emergency plan to cope with possible emergencies. The plan includes accident reporting, emergency response, accident handling, etc., to ensure that when an accident occurs, it can be handled quickly and effectively.

9 INDUSTRY, INNOVATION AND INFRASTRUCTURE

Our industry is driven by innovation and infrastructure development. PPROSHARE's annual R&D investment is as high as 30%. Besides, our production lines are now semi-automated, and we have self-developed and customized intelligent platforms and databases (attachment).

10 REDUCE INEQUALITIES

We oppose any form of discrimination, such as discrimination based on race, color, language, gender, religion or sexual orientation. Through different working hours models, we cater to the individual needs of our employees and provide equal opportunities for men and women in the company. In management and operation department, over 40% of our employees are women.

12 SUSTAINABLE CITIES AND COMMUNITITIES

The service life of our products is longer than that of many international brands. In addition, many of our products are recyclable or already contain recyclable ingredients. Our new generation of products has a great breakthrough in the process than the traditional membrane, more environmentally friendly and lower cost. It overcomes the serious secondary waste pollution caused by the traditional reverse osmosis membrane after being used. We will continue to work with our customers and partners to develop this potential in the long term.

13 CLIMATE ACTION

Through many of our products and services, we are already helping to reduce greenhouse gas emissions, such as the use of our membrane products in the production line for lithium battery recycling. We have now helped one of the world's largest producers of iron phosphate achieve zero release of wastewater and water recycling in the whole production process. In addition, our products can also be applied in the treatment of landfill leachate and municipal wastewater treatment.
