FATC – CEMENT – CGA

Cement and Rock Grinding Aids

Features:

FATC - CEMENT- CGA cement and rock grinding aids is an aqueous solution of organic chemicals offers all the benefits of traditional aids, such as increased grinding efficiency and cement flowability.

In addition, FATC – CEMENT - CGA will reduce fineness and achieve lower unit power costs without sacrificing strength; it provides savings through lower grinding costs per ton of cement.

FATC – CEMENT –CGA action and advantages:

- The dispersive action of FATC – CEMENT - CGA will decrease the interparticle attraction between cement grains and increases the rate of hydration of cement.
- Increase grinding efficiency by increasing mill output at the same fineness and energy consumption.
- Increase early and long-term compressive strengths of produced better quality cement.

Dosage:

500 - 800 gram per ton of cement and rock should be accurately proportioned through calibrated dosing system suitable for cement mill and output required to be added just ahead the grinding machines.

☑ Field trial to estimate the exact dosing of FATC - CEMENT -CGA is recommended.

Packaging:

- FATC – CEMENT -CGA is supplied in 200 Liter drums or in cubical container of 1000 Liter.
- The drums and containers are returnable to FATC after using the contented chemicals.

Storage:

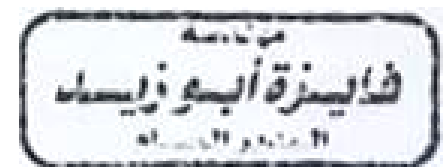

Store in a good ventilated warehouse away from direct sunlight, away from heated walls and away from heat.

يتم التخزين فى مخازن بعيدة عن ضوء الشمس المباشر والحرارة وذات تهوية جيدة.

Expire Date:

Maximum 12 month from the manufacturer date, while stored properly as mentioned above .

Empty containers are returnable.

الإدارة: ٥٧ شارع هشام لبيب - الحي الثامن - مدينة نصر - القاهرة - جمهورية مصر العربية
